

Dupuytren's Open Procedure Post Operative Rehabilitation Protocol

Following Surgery:

- Expect a surgical bulky dressing and extension splint to be kept in place until therapy appointment.
- Elevate and ice for at least 3 days.
- Continue to elevate as often as possible until your next clinic visit. (Elevate above your heart.)
- Shower with a plastic bag covering the splint and seal with tape.
- Take your pain medicine as needed and as prescribed. Call if any problems or questions arise.

Within 1 Week Post Op (at therapy):

- Your therapist will assist you with first dressing change and will show you how to do subsequent dressing changes.
- Therapist will make an extension splint for immobilization between exercises and at night.
- Therapist will address wound care, stretching, active and passive range of motion (ROM) exercises, scar management, edema control, and strengthening as appropriate (usually 2-3 visits per week).

2 Weeks Post Op:

- Follow up appointment in clinic.
- Sutures will be removed.
- Continue to attend therapy and do home exercise program.

8 Weeks Post Op:

- Follow up appointment in clinic

3 Months Post Op:

- Continue to wear splint at night to maintain extension (if indicated by M.D.).
